Algorytm Dijkstry może być wykorzystany przez serwisy mapowe do znajdowania najkrótszej trasy między dwoma punktami, w serwisach społecznościowych do wyszukiwania potencjalnych znajomych, korzystając np. z liczby wspólnych znajomych. Użyteczny jest również w przypadku szukania najkorzystniejszego lotu porównując czas lotu poszczególnych linii. Często używany jest w sieciach komputerowych czy telefonicznych. Do niektórych problemów wykorzystuje się odpowiednio zmodyfikowany algorytm Dijkstry. Dla grafów z negatywnymi wagami korzysta się z algorytmu Bellmana-Forda.
